INTERLOCAL AGREEMENT

THIS INTERLOCAL AGREEMENT is made and entered into pursuant to the provisions of T.C.A. § 5-1-113, § 5-1-114, § 12-9-104 and/or § 12-9-108 by and between BLOUNT COUNTY, TENNESSEE (hereinafter "Blount County") and TUCKALEECHEE UTILITY DISTRICT, a utility district organized and existing under the laws of the State of Tennessee and located in Blount County, Tennessee, (hereinafter "TUD").

WITNESSETH:

WHEREAS, the federal government has enacted the American Rescue Plan Act of 2021 (ARPA) on March 11, 2021 to provide federal funding to state and local governments for, among other projects, investments in water and sewer infrastructure; and

WHEREAS, Blount County has been allocated $12,885,976 directly for this purpose from this grant Act; and

WHEREAS, the Tennessee Department of Environment and Conservation (TDEC) has received ARPA funds and will distribute $6,619,757 locally to Blount County; and

WHEREAS, TDEC has issued a new source document entitled "Water Infrastructure Investment Plan Updates" dated February 3, 2022 which identifies recipients, the total allocation received by each recipient and the corresponding co-funding level required and this document is attached hereto as Exhibit 1; and

WHEREAS, Blount County has needs throughout the County for water and sewer infrastructure updates; and

WHEREAS, Blount County is not directly in the business of operating water or sewer facilities, but utilizes the various utility districts throughout and adjoining the County to provide these services to its citizens; and

WHEREAS, Tuckaleechee Utility District (TUD) is a utility district which provides utility services to Blount County, Tennessee; and

WHEREAS, Blount County and TUD have agreed for TUD to construct certain water infrastructure upgrades with the ARPA grant funds described above, which are two (2) separate utility projects with the first being duplicate feed to Townsend area and the second being connection to South Blount County Utility District, all as set forth in Appendix C hereto; and

WHEREAS, Blount County is the recipient of the ARPA funds and Blount County will fund and administer the projects in a manner consistent with the program objectives and terms and conditions of the award and will follow all applicable state, federal and local guidelines; and

WHEREAS, TUD will act as project manager and will be required to follow all applicable federal, state and local guidelines; and

WHEREAS, for the project duration, all materials will be assets of Blount County and at project conclusion, Blount County will evaluate the work and determine that all goals and objectives have been met and that all work has been met and that all work has been satisfactorily completed; and

WHEREAS, upon satisfactory completion of the projects, the matter will come back before the Blount County Commission at which time the approval of the Commission will be sought to dedicate the assets constructed back to the utility district for operation and maintenance; and

WHEREAS, pursuant to the ARPA, all projects must be completed by December 31, 2026.

NOW, THEREFORE, for and in consideration of the premises and the mutual covenants and agreements contained herein, it is agreed by and between the parties hereto as follows:

1. Blount County will fund the two (2) projects with Tuckaleechee Utility District as outlined in Appendix C, which include duplicate feed to Townsend area and connection to South Blount County Utility District.

2. Blount County agrees that it will fund and administer these projects in a manner consistent with the program objectives and terms and conditions of the award and follow all applicable federal, state and local guidelines.

3. Blount County and Tuckaleechee Utility District agree that they will follow the requirements outlined in the "Water Infrastructure Investment Plan Updates" attached hereto as Exhibit 1.

4. Tuckaleechee Utility District will act as the project manager and perform the construction and will be required to follow all applicable federal, state and local guidelines.

5. For the duration of the project, all of the materials will be assets of Blount County, Tennessee.

6. At the projects' conclusion, Blount County will evaluate the work to determine that all goals and objectives have been met and that all work has been satisfactorily completed.

7. Upon conclusion of the projects, if Blount County approves and determines the work has been satisfactorily completed, it is anticipated that the matter will come back before the Blount County Commission wherein they will be asked for approval to dedicate the assets constructed in the projects back to the utility district for the continued operation and maintenance.

8. The parties agree that all of the projects must be completed by December 31, 2026 pursuant to the terms of ARPA. Both parties agree that they will fully and completely follow the program objectives, terms and conditions as set forth under the ARPA and any other guidelines issues by the federal, state or local government through the completion of this project.

9. The parties agree that the monies herein are all coming from the funding from the ARPA and the State of Tennessee as grants and that no local money will be utilized on the project.

10. This agreement shall be submitted to the Blount County Commission for approval and to the managing Board of Directors of the Tuckaleechee Utility District for approval. Upon approval of both entities, the same shall be executed by an executive officer of each entity.

IN WITNESS WHEREOF, the parties have executed duplicate counterparts of this agreement each of which shall be deemed an original, as of the 21st day of April, 2022.

SECTION I

OVERVIEW OF TUCKALEECHEE

HISTORY

Prior to 1959 the only Public Water System within the bounds of the current Tuckaleechee Utility District (TUD) was the City of Townsend. That system had a single well and a limited service area around the center of the community. Judge Asher Howard created the TUD in May 1959. It was not until 1965 customers began to receive service.

Over the past half century the original system has been upgraded numerous times. However, the basic original concept remains. At the outset all of the water was purchased for resale from the City of Alcoa. That connection was at a pumping station on Highway 411 near Wildwood. Over the years, another connection was made with the City on Highway 411 near River Ford Road.

Initially there was three (3) storage reservoirs. The Cold Springs tank received water from the initial Alcoa connection. Water was then pumped to Townsend; then, on the Dry Valley pressure zone. Today those basic zones still exist. The Cold Springs pressure zone has the Nebo tank with a 2,000,000 gallon (gal.) capacity. The Townsend zone now has the Lovers's Lane 2,000,000 gallon capacity and the Mountain Avenue tank at 500,000 gallon. The Dry Valley tank has been upgraded and is due for another. There are nowaddition storage facilities. They include:

- Kelly Ridge
- Stonegate
- West Millers Cove.

The Blackberry Mountain development has two (2) tanks which may become a part of the TUD system.

SERVICE AREA

The District is located in the eastern portion of Blount County. Its service area is approximately ninety (90) square miles. It is bound by the Knox-Chapman Utility District to the North, the Blount/Sevier County line to the Northeast, the Great Smoky Mountains National Park to the Southeast and portions of the South Blount Utility District; and also, to the Cities of Maryville and Alcoa service areas to the West.

Generally, the service area is rural. Townsend is the most densely populated area. It is a tourist area with restaurants, motels and other attractions. Most of the customers are residential and small schools.

WATER SOURCE

Initially the only source was the City of Alcoa. The raw water source for Alcoa is Little River which the City of Maryville also withdraws water. In recent years a limited connection was made with the Knox-Chapman utility District. Their source is the French Broad River, a much more reliable raw water source.

Both the City of Alcoa and Knox-Chapman have adequate treatment capacity. The limiting situation is the Little River source during extreme weather events resulting in very low flow.

It is proposed to make a third connection with the South Blount Utility District. Their raw water source is the Little Tennessee River. Both the Little Tennessee River and French Broad are major rivers whose minimum flow would be a very reliable water source.

CUSTOMERS

As of June 30, 2021, the audit showed 4,665 customers. There is only one 6" meter presently. That is primarily for a fire line rather than a large consistent user. There is one 4" meter and one 3" meter. Of the residential users there are 4,282 meters outside the City of Townsend and 267 inside the City.

The water sales continue to grow. TUD is like most utilities in that peak demand is seasonal. The peak month of sales was 32,776,000 and 29,197,000 gallons in 2021 and 2020 respectively. Using the 2021 month of August the average day consumption was 1,057,290 gallons (734 gpm). That was the average of the month. The peak day may have 1,000 gpm, or more. It is clear that the input to the District should be on the order of 1,400 gpm in the near term.

SECTION II

PROJECT DESCRIPTION

As mentioned in Section I, TUD serves a large portion of Blount County. The Townsend area is at the extreme end of the District. That portion of the District is a major tourist area. It is at an elevation that requires pumping of water from the main pressure zone. Currently, the Townsend area is served through a single pipe line and booster station. There are two (2) major reservoirs in that service zone that provides a few days of storage for emergency. If there was a "slide" on the mountain, as has occurred in the past, that single line could be severed. Depending on "clean-up" time of the slide and line repair, the entire Townsend area could be without water. Within the past five (5) years there has been two (2) "Mountain Slides" which caused traffic disruption. One of the slides was at the main transmission line to Townsend that closed the road for a few weeks. Fortunately, the water main was not damaged. However, if the main had been damaged, Townsend could have been without drinking water. The single pumping station is at risk from potential flooding as weather events continue to change.

In order to negate risk a duplicate feed must be constructed to provide reliable service to the Townsend area. That would include a new twelve (12) inch diameter water main from the Walland area to Kinzel Springs and a new pumping station. The existing transmission main is on the north side of Little River and the proposed new main will be on the south side of Little River. The topography of the route is a river gorge. For risk reduction it is proposed that the new pipe be on the opposite side of the river. Also, the new pumping station be downstream of the gorge at a location above the regional flood elevation.

It is estimated that the new pipe will be approximately 22,000 linear feet. The existing booster near Kinzel Springs is rated at 400 gallons per minute (gpm). The new boosters will be designed for 700 gpm. The new main would have a velocity of 1.99 feet per second (fps) with a pressure drop of approximately the existing pipe at 400 gpm. Therefore, the new pipe alone would meet demand well into the future. As the demand increases the booster station could be expanded by 100% without increasing or replacing the new pipe.

To further negate risk, the project includes a new connection to the South Blount Utility District. That new connection will allow for water from the Little Tennessee River to augment the current Little River Source from the City of Alcoa connections. Tuckaleechee currently has a transmission main in place near the Heritage High School from a previous connection with the City of Maryville. In order to get the South Blount water a booster station would be required to lift water into Tuckaleechee's Nebo tank. The Nebo tank over flow elevation is 1,285 as is the Cold Spring tank. This proposed connection reduces risk by providing a new more reliable raw water source; but gives increased flow into the Nebo pressure zone that supplies Townsend. The Townsend pressure zone is 1,344.2 elevation. The boosters, existing and proposed must overcome 59.2 feet of static head and friction loss. This South Blount project is proposed to be funded by

Operation	01/01/2027

SECTION V

CONCLUSIONS AND RECOMMENDATIONS

CONCLUSIONS

The Townsend area of the Tuckaleechee Utility District is at high risk due to a single pipeline and pumping station supplying the demand. The District as a whole is at risk with limited supply due to dependence of the Little River being a major raw water source.

These risk can be mitigated by constructing a duplicate feed (line and pumping station) to Townsend and adding another source of water for resale. By adding a connection to the South Blount Utility District the Little Tennessee River would be an added raw water source. Currently, there is a connection with the Knox-Chapman Utility District. TUD is constructing increased infrastructure to be able to purchase more water from the French Broad River. These two (2) connections will migrate the current risk of major dependence on the City of Alcoa and Little River. With these interconnections with other utilities regionalization is implemented.

The American Rescue Plan (ARP) has funds appropriated that are administrated by the State and County. The Townsend duplicate and South Blount connection meets two (2) of the eleven (11) criteria for funding.

RECOMMENDATIONS

The Tuckaleechee Utility District should pursue funding for these critical projects. As the final application criteria is published, effort must be made to complete the application process.

Section IV has a proposed schedule of activities for the project. Care must be exercised to update the schedule as required to comply with the funding criteria. An early effort will be to retain the services of a reliable competent consulting engineering firm.

Water Infrastructure Investment Plan Updates

February 3, 2022

I. UPDATES

Reduced Co-Funding and Elimination of Local ARP Co-Funding Incentive

U.S. Treasury's Final Rule guiding eligible uses of ARP funds established a fixed amount election (referred to as the "standard allowance") of $10 million for revenue loss in addition to the option to calculate revenue loss caused by the pandemic utilizing a formula. Considering this additional streamlined option, the Tennessee Department of Environment & Conservation (TDEC) decided to eliminate the previously included incentivization strategy of utilizing local ARP funds to meet co-funding requirements. Instead, TDEC lowered all subrecipient co-funding requirements by 5%, reducing the co-funding requirement range from 20-40% to 15-35%. New co-funding requirements are reflected in the updated funding allocation table attached to this document.

The other two incentive strategies – addressing state priority areas of emphasis and submitting a collaborative proposal – are still included. Cities and counties may utilize one of those strategies for an additional 5% co-funding reduction.

Inclusion of Four Additional Cities

In the *Water Infrastructure Investment Plan*, released December 17, 2021, TDEC identified eligible subrecipients as all counties and eligible cities. Eligible cities are those that are incorporated and operate and manage a drinking water or wastewater system or a permitted stormwater system. In creating this list, TDEC did not include four cities that jointly own and operate systems – Caryville, Jacksboro, Dowelltown, and Liberty. These cities *do* meet eligibility criteria and are therefore included in the modified funding allocation table below. Other city and county allocations have not changed relative to the December 2021 version.
